

Technical Services

Making it easy to expand your business

Location is one of the most important and sometimes one of the most difficult decisions you can make.

Once you choose the Tennessee Valley region as the place to grow your business, the rest is easy. That's because the Tennessee Valley Authority is your site selection team.

Our architectural and engineering experts can advise you on the best site for your business. We can give you a thorough look beyond the surface of any site or facility you may be considering by providing preliminary site evaluations as well as conceptual designs for your company footprint. We pride ourselves on being able to provide a vision for how you can locate and be successful in the Tennessee Valley.

Additionally, our staff of economic researchers can answer a wide variety of questions that will make your decision an easier one. Need to know a list of suppliers for your company's key raw materials? Give us a call and let us use our extensive data sources to show you a list of potential suppliers in a given radius around your location. Even better, want to see a list of potential customers for your product in selected NAICS codes? We can do that, too.

Because we have professional engineers, architects and researchers on staff, there are a number of services we can provide to make your decision and planning process more efficient and more successful.

“TVA's technical service expertise helped Bristol, Tennessee, advance in economic development far beyond what we would be otherwise able to accomplish. Our partnership is really advancing economic development.”

**Mike Browder
General Manager,
Bristol Tennessee
Electric System**

Economic Forecasting

TVA develops regional and subregional economic forecasts and related information on the entire TVA service area. This information is used for resource planning and load forecasting, corporate planning and budgeting, water resource project and navigation facilities planning, and economic development activities.

Industry-Specific Assistance

This type of help is provided for the following industries: textiles, fibers and plastics, furniture and wood products, food services, metals, and coatings.

Comprehensive Services Program

Through this initiative TVA and the distributors of TVA power provide a variety of engineering and technical assistance services for commercial and industrial customers at no charge. The program covers all areas of energy use, including power analysis, technical services, energy use, and predictive maintenance. Services include power factor evaluation, temporary meter installation and data collection, energy audits, compressed air leak detection, power quality studies, and infrared scanning for detection of hot spots and heating/cooling loss. If TVA does not offer a specific service needed by your industry, we are ready to help you locate a qualified provider.
